196-225+	

A BPM (beats per minute) number can be added after a square, for increased precision:

 120 120 beats per minute.

The BPM number can be a quotient:

 $\frac{120}{8}$ 120 1/8-beats per minute (15 BPM). The needle in the square indicates the value of the number above the division bar.

It is also possible to just write out a number below a division bar:

 $\frac{1}{2}$ 106-135 1/2-beats per minute (53-67 BPM).

Gradual changes:

Tempo Squares

Traditional

accelerando, stringendo

ritardando, rallentando

All tempo squares remain valid until replaced.
